Author: Killingbeck, J. P.

Short title: A Hill-series approach to wavefunction nodes.

MR Number: 2525490

Primary classification: 65L10

Secondary classification(s): 65L15 81Q05

Review text:

Under the slightly mysterious title a wealth of relevant comments is presented on the number of aspects of certain specific numerical treatment of central (i.e., ODE) perturbed oscillators and Coulomb systems. Besides a lot of pleasure over details (combining virial theorem, polynomial approximations and finite differences anew) the reader will find the key message in the sentence: "the currently increasing tendency to blast every calculation with hundreds of digits of precision might eventually have deleterious effects on the role played by subtlety and ingenuity in computational physics."
