Author: Jaramillo, Benjamin; Martinez-y-Romero, R. P.; Nunez-Yepez, H. N.; Salas-Brito, A. L.

Short title: On the one-dimensional Coulomb problem.

MR Number: 2564076

Primary classification: 81Q60

Secondary classification(s): 81Q05

Review text:

The well known, extremely elementary textbook solution of Schroedinger equation $H\psi = E\psi$ on half-axis (cf. Eqs. (3) and (5)). Plus proposal (8) of a superpotential and a manifestly wrong last formula (11) giving its derivative. What fills the major part of the three pages of this amazing “publish or perish” product is just a sketchy and speedy review of the existence of 54 relevant references. Chosen more or less at random and including quite a few self-citations. The new, threatening proof of the steadily lowering quality of referees in some Elsevier Journals. Plus a missed pedagogical opportunity of showing how easily the contemporary mathematics would deal with the similar model(s).
